HSBC Global Funds ICAV – Pricing Adjustment

What is a pricing adjustment?

A pricing adjustment (also called swing pricing) is a mechanism specifically designed to protect existing investors in a fund from the transaction costs of large net subscriptions or redemptions. These transactions costs include, but are not limited to, brokerage fees and taxes on transactions.

Without a pricing adjustment, transactions costs would fall on all shareholders in the fund. Instead, when this mechanism applies, the transaction costs are borne only by those client(s) who have just subscribed or redeemed, since it is their transactions that cause the costs.

HSBC Global Funds ICAV (HSBC ICAV) use a pricing adjustment mechanism to protect their existing investors in this way.

How does this mechanism work?

The pricing adjustment mechanism is a system of rates – expressed in % – with three main components (see the example opposite for an illustration).

1. A threshold rate

We calculate the total subscriptions minus the total redemptions in the fund on every valuation day.

If there are more subscriptions, the result will be “net subscriptions” and if there are more redemptions, the result will be “net redemptions”.

If, on any given valuation day, the result of ‘subscriptions – redemptions’ is a larger percentage of the fund’s Net Asset Value (NAV) than the threshold rate, it triggers one of the adjustment rates.

2. A buy adjustment rate

This is applied when the amount of net subscriptions is bigger than the threshold rate.

In this case, the fund’s NAV per share is increased by the buy adjustment rate.

The effect is the same as asking investors to pay an extra fee to subscribe on that day, and then putting this fee back into the fund so the existing shareholders don’t suffer the impact of the transaction costs.

3. A sell adjustment rate

This rate works exactly like the buy adjustment rate, but for situations when the amount of net redemptions is bigger than the threshold rate.

When this happens, the fund’s NAV per share is reduced by the sell adjustment rate.

The rates may be different for each fund, as shown in our table of adjustment rates on page 2.

An example

- Fund AUM: USD100 million
- Threshold rate: 1% of the AUM
- Subscriptions: USD10 million
- Redemptions: USD8 million
- Subscriptions – Redemptions: USD2 million (net subscriptions)

In this example, the percentage of the amount of net subscriptions (USD2 million, therefore 2%) is higher than the threshold rate (1% of USD100 million, which is USD1 million).

Therefore, the fund’s NAV per share will be adjusted up using the buy adjustment rate.

The table in the next page shows the current adjustment rates (buy and sell rates) for each fund where pricing adjustment applies. We do not disclose the threshold figures.

Do threshold and adjustment rates ever change?

We review the thresholds on an annual basis and the adjustment rates on a quarterly basis, at a minimum.

However, we may also adjust the thresholds and the rates on an *ad hoc* basis, to respond to market-specific circumstances and protect our funds’ investors.

Price adjustment for large flows

For HSBC ICAV, additional thresholds have been established to define a capital flow as a large/significant flow. If this significant flow threshold is met, an adjusted swing factor is calculated based on the true costs incurred to invest / disinvest. Such factor would only be applied on the date of the large capital flow. It can be provided upon request from your local distributor.

Conclusion

The sole objective of a pricing adjustment is to protect shareholders.

Whenever investors are impacted by the pricing adjustment when subscribing / redeeming, they are in fact paying for the transaction costs of dealing so existing shareholders are not disadvantaged.

In addition, they would incur these dealing costs themselves if they decided to invest directly.

HSBC ICAV – Pricing Adjustment

The Adjustment Rates disclosed in the table below are effective from 05th December 2025.

- The Repurchase % and Sale % shown in the table below are from the Sub-Fund's perspective.
- A Repurchase from the Sub-Fund's perspective means a sell from investor's perspective.
- A Sale from the Sub-Fund's perspective means a buy from investor's perspective.

Investors should note that the Adjustment Rates are reviewed at least on quarterly basis. However, the Adjustment Rates are also subject to be updated on an *ad hoc* basis. As a result, the Adjustment Rates may suddenly change and therefore differ from the rates provided in this document.

Sub-Fund	Adjustment Rate	
	Repurchase (%)	Sale (%)
ICAV China Government Local Bond UCITS ETF	0.01	0.11
ICAV Global Aggregate Bond Index Fund	0.04	0.12

HSBC Global Funds ICAV - Transition Resources Leader Equity Fund	0.18	0.28
HSBC GF ICAV Euro Government Bond UCITS ETF	0.01	0.01
HSBC GF ICAV US Treasury Bond UCITS ETF	0.00	0.06
HSBC GF ICAV Japan Government Bond UCITS ETF	0.07	0.07

HSBC GF ICAV Credit Income Advance Fund	0.17	0.17
---	------	------

* Actual costs are used as adjustment rate. Current rate can be requested via the sales representative.

Risk Considerations

Investment in any sub-fund carries with it a degree of risk. The value of an investment, and any income from it, may fall as well as rise, and you may not get back the amount you originally invested.

Potential investors should review the HSBC Global Funds ICAV Prospectus in its entirety and the relevant Key Investor Information Document and consult with their legal, tax and financial advisors prior to making a decision to invest.

UK

The funds are sub-funds of the HSBC Global Funds ICAV, an Ireland domiciled SICAV. UK based investors in the sub-funds are advised that they may not be afforded some of the protections conveyed by the provisions of the Financial Services and Markets Act 2000. HSBC Global Funds ICAV is recognised in the United Kingdom by the Financial Conduct Authority under section 264 of the Act. The shares have not been and will not be offered for sale or sold in the United States of America, its territories or possessions and all areas subject to its jurisdiction, or to United States Persons. All applications are made on the basis of the current Prospectus, Key Investor Information Document (KIID), Supplementary Information Document (SID) and most recent annual and semi-annual reports, which can be obtained upon request free of charge from HSBC Global Asset Management (UK) Limited, 8 Canada Square, Canary Wharf, London, E14 5HQ. UK, or the local distributors. **Investors and potential investors should read and note the risk warnings in the prospectus and relevant KIID and additionally, in the case of retail clients, the information contained in the supporting SID.**

Some of the sub-funds are unregulated collective investment schemes for UK Regulatory purposes. The promotion of these sub-funds is therefore restricted in the UK by the Financial Services and Markets Act 2000 and this document can only be issued to persons permitted under COBS 4.12 of the FCA Handbook. This document is approved for issue in the UK by HSBC Global Asset Management (UK) Limited who are authorised and regulated by the Financial Conduct Authority. © Copyright 2020 HSBC Global Asset Management (UK) Limited. The funds are sub-funds of the HSBC Global Funds ICAV use the swing principle calculation method which determines the net asset value of the fund. Swing pricing allows investment funds to pay the daily transaction costs arising from subscription and redemptions by incoming and outgoing investors. The aim of swing pricing is to reduce the dilution effect generated when, for example, major redemptions in a fund force its manager to sell the underlying assets of the fund. These sales of assets generate transaction costs and taxes, also significant, which impact the value of the fund and all its investors.

The value of an investment in the portfolios and any income from them can go down as well as up and as with any investment you may not receive back the amount originally invested.
