

HSBC Global Funds ICAV

Global Corporate Bond UCITS ETF

Marketing communication | Monthly report 30 September 2025 | HCBE LN | ETFCHEUR

Investment objective

The Fund aims to provide regular income and capital growth by tracking as closely as possible the performance of the Bloomberg Global Aggregate Corporate Bond Index (total return hedged to US dollars) (the Index).

Investment strategy

The Index is comprised of investment grade corporate bonds. The Fund will be passively managed and will invest in corporate investment grade bonds, corporate emerging market bonds and other bonds all of which are Index constituents. It uses an investment technique called optimisation, which seeks to minimise the difference in return between the Fund and the Index by considering tracking error (the risk that the Fund return varies from the Index return) and trading costs when constructing a portfolio. The Fund will not necessarily invest in every Index constituent or invest proportionally to each constituents' Index weight and may invest in assets outside of the Index, such as: bonds with a credit rating of Ba1, BB+ and below; bonds issued by governments, government-related and supranational entities; as well as cash, money market instruments and funds. The Fund can invest in bonds issued in developed and emerging markets. The Fund's primary currency exposure is to USD.

See the Prospectus for a full description of the investment objectives and derivative usage.

Main risks

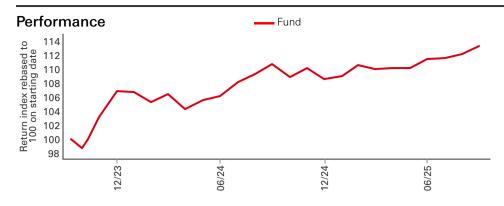

- The Fund's unit value can go up as well as down, and any capital invested in the Fund may be at risk
- The Fund invests in bonds whose value generally falls when interest rates rise. This risk is typically greater the longer the maturity of a bond investment and the higher its credit quality. The issuers of certain bonds, could become unwilling or unable to make payments on their bonds and default. Bonds that are in default may become hard to sell or worthless.
- The Fund may invest in Emerging Markets, these markets are less established, and often more volatile, than developed markets and involve higher risks, particularly market, liquidity and currency risks.

Risk Disclosure

- To the extent that the Fund seeks to replicate index performance by holding individual securities, there is no guarantee that its composition or performance will exactly match that of the target index at any given time ("tracking error").
- Derivatives may be used by the Fund, and these can behave unexpectedly. The pricing and volatility of many derivatives may diverge from strictly reflecting the pricing or volatility of their underlying reference(s), instrument or asset.
- Investment Leverage occurs when the economic exposure is greater than the amount invested, such as when derivatives are used. A Fund that employs leverage may experience greater gains and/or losses due to the amplification effect from a movement in the price of the reference source
- Where overseas investments are held the rate of currency exchange may cause the value of such investments to go down as well as up.
- Further information on the potential risks can be found in the Key Information Document (KID) and/or the Prospectus or Offering Memorandum.
