

HSBC ETFs PLC

HSBC MSCI WORLD UCITS ETF

Marketing communication | Monthly report 30 June 2025 | HWDC SW | CHF Hedged (Acc)

Investment objective

The Fund aims to track as closely as possible the returns of the MSCI World Index (the "Index"). The Fund will invest in or gain exposure to shares of companies which make up the Index.

Investment strategy

The Index is made up of large and mid-cap companies of the world's developed countries, as determined by the Index provider. The Fund will be passively managed and will utilise an investment technique called optimisation. This technique seeks to minimise the difference in return between the Fund and the Index by taking into account tracking error and trading costs when constructing a portfolio. The Fund will not necessarily invest in every company that comprises the Index, or invest proportionally to each company's weight in the Index. It can also invest in companies outside the Index but which are expected to provide similar performance and risk characteristics to certain Index constituents. If the Fund cannot invest directly in the companies, it may gain exposure by using other investments such as depositary receipts or derivatives. The Fund may invest up to 10% in total return swaps and contracts for difference. The Fund may invest up to 10% in other funds, including HSBC funds. See the Prospectus for a full description of the investment objectives and derivative usage.

Main risks

- The Fund's unit value can go up as well as down, and any capital invested in the Fund may be at risk.
- The value of investible securities can change over time due to a wide variety of factors, including but not limited to: political and economic news, government policy, changes in demographics, cultures and populations, natural or human-caused disasters etc.
- To the extent that the Fund seeks to replicate index performance by holding individual securities, there is no guarantee that its composition or performance will exactly match that of the target index at any given time ("tracking error").

Risk Disclosure

- Derivatives may be used by the Fund, and these can behave unexpectedly. The pricing and volatility of many derivatives may diverge from strictly reflecting the pricing or volatility of their underlying reference(s), instrument or asset.
- Investment Leverage occurs when the economic exposure is greater than the amount invested, such as when derivatives are used. A Fund that employs leverage may experience greater gains and/or losses due to the amplification effect from a movement in the price of the reference source.
- Where overseas investments are held the rate of currency exchange may cause the value of such investments to go down as well as up.
- Further information on the potential risks can be found in the Key Information Document (KID) and/or the Prospectus or Offering Memorandum.
