

# HSBC ETFs PLC

# HSBC MSCI TAIWAN CAPPED UCITS ETF

Marketing communication | Monthly report 30 September 2025 | HTWN SW | USD

# Investment objective

The Fund aims to track as closely as possible the returns of the MSCI Taiwan Capped Index (the "Index"). The Fund will invest in or gain exposure to shares of companies which make up the Index.

# Investment strategy

The Index is made up of the largest stock market listed companies in Taiwan, as defined by the Index provider. The Fund will be passively managed and will aim to invest in the shares of the companies in generally the same proportion as in the Index. However, there may be circumstances when it is not possible or practical for the Fund to invest in all constituents of the Index. If the Fund cannot invest directly in the companies that constitute the Index, it may gain exposure by using other investments such as depositary receipts, derivatives or funds. The Fund may invest up to 35% of its assets in securities from a single issuer during exceptional market conditions. The Fund may invest up to 10% of its assets in total return swaps and contracts for difference. The Fund may invest up to 10% of its assets in other funds, including HSBC funds. See the Prospectus for a full description of the investment objectives and derivative usage.

# Main risks

- The Fund's unit value can go up as well as down, and any capital invested in the Fund may be at risk.
- The value of investible securities can change over time due to a wide variety of factors, including but not limited to: political and economic news, government policy, changes in demographics, cultures and populations, natural or human-caused disasters etc.
- The Fund may invest in Emerging Markets, these markets are less established, and often more volatile, than developed markets and involve higher risks, particularly market, liquidity and currency risks.

## Risk Disclosure

- To the extent that the Fund seeks to replicate index performance by holding individual securities, there is no guarantee that its composition or performance will exactly match that of the target index at any given time ("tracking error").
- Derivatives may be used by the Fund, and these can behave unexpectedly. The pricing and volatility of many derivatives may diverge from strictly reflecting the pricing or volatility of their underlying reference(s), instrument or asset.
- Investment Leverage occurs when the economic exposure is greater than the amount invested, such as when derivatives are used. A Fund that employs leverage may experience greater gains and/or losses due to the amplification effect from a movement in the price of the reference source.
- Where overseas investments are held the rate of currency exchange may cause the value of such investments to go down as well as up.
- Further information on the potential risks can be found in the Key Information Document (KID) and/or the Prospectus or Offering Memorandum.
