HSBC Global Investment Funds –
Multi-Asset Style Factors
(HSBC Asset Management)

In the Alternative Risk Premia category, HSBC GIF Multi-Asset Style Factors is the best performing fund over the following time periods:

- ◆ Over 3 years with a return of 4.03% and a Sharpe of 0.81
- ◆ Over 4 years with a return of 3.65% and a Sharpe of 0.73
- ◆ Over 5 years with a return of 4.56% and a Sharpe of 0.89

Performance and ratios are gross of fees.

HSBC GIF MULTI-ASSET STYLE FACTORS

Monthly Report
30 April 2026
EUR Share Class E

Objective and investment policy

The aim is to provide capital growth and income on your investment over time.

The Fund will mainly use derivatives to meet its objective.

The Fund's average volatility is expected to be around 7% over the investment horizon. It may fluctuate due to market conditions and the annualized volatility could be lower or higher than this level.

The Fund employs long and short investment strategies within a set of distinct investment style factors (« Style Factors »).

The Fund will implement the Style Factors by taking long and short positions using derivatives. In simple terms, a long position is investing with the expectation that an asset will rise in value. A short position is investing with the expectation that an asset will fall in value, with the aim of securing a profit as a result. These strategies are not cash-neutral and may assume directional exposure to each of the asset classes in which the Fund invests.

In using derivatives to take long and short positions the fund will gain exposure to a diversified range of assets including equities (i.e. shares of companies), bonds and currencies globally, including emerging markets.

The Style Factors employed by the Fund include, but are not limited to « carry », « value » and « momentum ».

- Carry strategies seek to take long positions in higher yielding assets and short positions in lower yielding assets.
- Value strategies seek to take long positions in undervalued assets and short positions in overvalued assets.
- Momentum strategies seek to take long positions in assets with higher recent performance and short positions in assets with lower recent performance.

The Styles are expected to have low correlation to each other.

The Fund is actively managed and does not track a benchmark. The Fund has a target to a reference benchmark, €STR.

Strategic Factor allocation

Target Factor Allocation by Style
(Risk budget)

Carry	33,3 %
Momentum - Cross Section	16,7 %
Momentum - Time Series	16,7 %
Value	33,3 %
Total:	100,0 %

HSBC GIF Multi Asset Style Factors aims to provide a cash plus return with a low correlation to traditional asset classes by taking systematic exposures to **Style factors***.

The portfolio is exposed to three **Style factors***: carry, momentum and value; each style factor is implemented across equity, bond and currency markets. Style factors are implemented in their « purest » form, combining long and short positions.

Style factor* exposures are combined to maximize diversification across factors and asset classes using a risk-budgeting approach, with a target annual volatility of 7%. The portfolio has no structural exposure to any asset class hence it is expected to exhibit a weak correlation to financial markets.

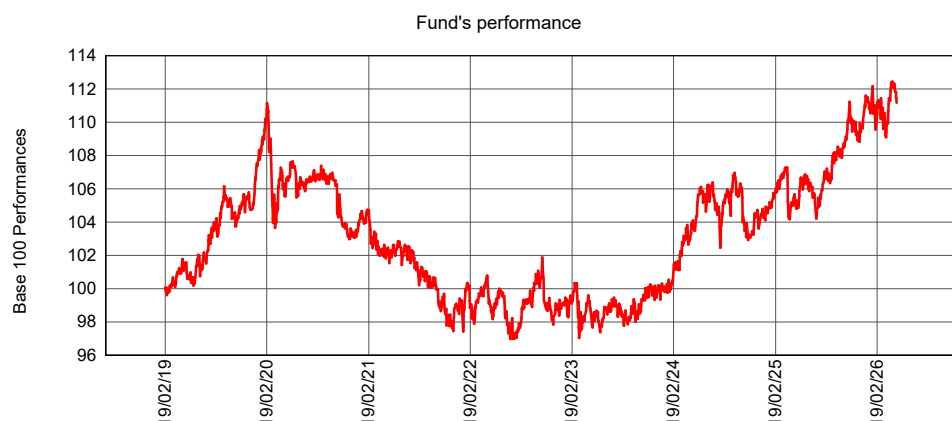

*A **Style factor** is any characteristic shared by a group of assets that consistently explains the assets' return relative to the return of the asset class.

Fund Manager Commentary

Performance & current holdings

The strategy outperformed money markets in April. The Carry and Momentum factors made positive contributions that were weathered by the negative contributions of the Value factor.

In terms of contribution by asset class, currency portfolios made positive contributions while equity and bond portfolios were little changed. Within equity portfolios, developed country and sector portfolios made positive contributions that were weathered by the negative contributions of emerging country portfolios.

Bond portfolios mainly benefited from the overall net short duration positioning and the short exposures to the Korean market and the long exposures to the New-Zealand and Swedish markets while they were negatively impacted by the long exposures to the UK market and the short exposures to the Norway market.

Equity country portfolios mainly benefited from the overall net long equity positioning and the short exposures to the Australian, French, Malaysian and Thailand markets and the long exposures to the US market and were negatively impacted by the short exposures to the German market and the long exposures to the UK, Brazilian, Mexican and South-African markets.

Sector portfolios mainly benefited from the short exposures to the US Materials sector and to the European Chemicals and Telecom sectors and the long exposures to the US Technology sector and to the European Financial Services sector and were negatively impacted by the short exposures to the US Consumer Discretionary sector and the long exposures to the European Household Goods sector.

Currency portfolios mainly benefited the long exposures to the Norwegian krone and Brazilian real and the short exposures to the Swiss franc, Singapore dollar and South-African rand and were negatively impacted by the long exposures to the Indian rupee and Indonesian rupiah and the short exposures to the Hungarian forint.

Outlook

As at the end of April, the strategy is positioned to capture carry, momentum and value premia across equity, bond and currency markets. The main holdings are, in bond portfolios, long exposures to the UK and New-Zealand markets and short exposures to the Swiss and Norway markets; in equity portfolios, long exposures to the Swedish, Spanish, South-African and Brazilian markets and short exposures to the German, French, Indian and Thailand markets.

In currency portfolios, the strategy mainly has long exposures to the Norwegian krone, the New-Zealand dollar, the Brazilian real and the Indian rupee and short exposures to the Swiss franc, the Canadian dollar, the Polish zloty rand and the Hungarian forint.

The value of investments and any income from them can go down as well as up and investors may not get back the amount originally invested. The underlying assets of this fund are totally or partly exposed to bond markets. The value of these assets may increase or decrease. An increasing interest rate level and/or negative changes in the credit ratings of the underlying issuer of the assets have a negative effect on the assets/affect the value of the assets negatively. The value of shares in equity funds may be subject to relatively strong fluctuations and capital losses may be incurred. The fund carries out investments into smaller companies. These companies may be less liquid and more volatile than investments in larger companies. Therefore, such investments carry a higher risk. The fund is denominated in EUR. The fund also invests in securities denominated in other currencies which results in a currency risk. If the investor's own currency is not EUR an additional currency risk may occur. Further information can be found in the prospectus and key investor information document (KIID).
